**National Register of Historic Places Registration Form**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional certification comments, entries, and narrative items on continuation sheets if needed (NPS Form 10-900a).

**7. Description**

**Architectural Classification**
(Enter categories from instructions.)

Other: Pennsylvania through-truss

---

**Materials**
(Enter categories from instructions.)

foundation: Concrete

walls: Steel

roof: Steel

other:
Healdsburg Memorial Bridge, built in 1921 across the Russian River, is rare among American steel truss bridges. Its intricate Pennsylvania through-truss design, using extra diagonal bracings to relieve stress, is a throwback to an evolutionary era of steel truss bridges when engineers needed stronger structures to accommodate wide crossings and heavy loads at affordable cost. With 20 pin-connected panels spread across two spans, the Healdsburg Memorial Bridge is a striking example of the type, now fast disappearing from the American landscape.

Healdsburg Memorial Bridge, 438 feet long, carries mostly local traffic now but once was a landmark on the historic Redwood Highway, linking San Francisco with Oregon. The two-lane bridge handles 7,400 vehicles a day and accommodates pedestrians and bicyclists on outer pathways.

Once believed to have numbered in the hundreds, bridges of the Pennsylvania through-truss design are down to a relative handful. Healdsburg Memorial Bridge may be one of only 13 of its type still open to vehicles in the United States and just two in California, according to one authority, Bridgehunter.com, a Web site that inventories more than 30,000 historic American bridges. According to the California Department of Transportation, there are eight Pennsylvania truss roadway bridges remaining in the state.

In the latter part of the 19th Century, truss bridges were well established on rail lines and roads. But as the weight of trains grew, railroads needed crossings to withstand heavier loads. Thus came the Pennsylvania truss type, so named because of its origins in the design laboratories of the Pennsylvania Railroad. The design sprang from existing Pratt and Parker truss types, which placed full-length diagonal members in panels for the first time, and added bracing to the diagonal pieces.

The Pennsylvania truss introduced half-length struts for the bottom parts of panels or half-length ties for upper portions, and sometimes both. Both spans of the Healdsburg Memorial Bridge contain two stress-relieving ties, each positioned between full-length diagonal members on opposite sides of the center panels and the bridge's polygonal top chord. Each tie, as well as other diagonal members, is attached with pins, instead of rivets, to enable “give” as the bridge flexes and moves. The bridge gets much of its architectural flair from the sloping top chord, common to Pennsylvania and Parker truss designs. The varied height helps the bridge resist bending as weight builds near the center.

The Pennsylvania type, like other steel truss bridges, faded in use after 1930. In some design circles, especially among a group of urbanists of the time, truss types were seen as gaudy, an irony given the cookie-cutter blandness of many concrete crossings that took the place of truss bridges.

Memorial Bridge is largely unmodified since its construction. Decorative lights were removed in the 1950s, while roadside curbs and outer chain-link fences have been added for safety.
8. Statement of Significance

Applicable National Register Criteria
(Mark “x” in one or more boxes for the criteria qualifying the property for National Register listing.)

A X Property is associated with events that have made a significant contribution to the broad patterns of our history.

B Property is associated with the lives of persons significant in our past.

C X Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

D Property has yielded, or is likely to yield, information important in prehistory or history.

Areas of Significance

American Bridge Co., builder

Period of Significance (justification)
The construction of Healdsburg Memorial Bridge in 1921 characterized an era beginning in the 1870s and ending in the 1930s in which steel-truss bridges morphed as the need for heavier and longer spans grew. Its construction also helped open automobile travel in Northern California and aided development of recreation in the Russian River area.

Criteria Considerations (explanation, if necessary)
Healdsburg Memorial Bridge
Sonoma County, California

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance and applicable criteria.)

With its sturdy, complex look, Healdsburg Memorial Bridge embodies an adventurous era in bridge building and stands as a classic example of a style of construction that met the challenges of the nation's growing infrastructure. The bridge is also historically significant for its role in the development of the road system of Northern California and its place in the recreational appeal of the Russian River region.

Narrative Statement of Significance (Provide at least one paragraph for each area of significance.)

Healdsburg Memorial Bridge is more than a vehicle crossing of rare stature. It is integral to the town of Healdsburg, located in the center of Sonoma County wine country, and for decades supported the recreational pleasures of the region.

Memorial Bridge, designed locally and built under the direction of the American Bridge Co., was the first steel structure over the Russian River, which is popular among bathers, kayakers and anglers for steelhead trout. The bridge stands at a wide crossing established in the 1850s by early Sonoma County settlers who forded the river at a low point on the south bank.

In addition to holding up under 90 years of traffic, including heavy timber trucks, the bridge has survived at least five major floods that brought water up to its deck. A 2008 report by the California Department of Transportation said the bridge, resting in mid-river on a single concrete pier, still met all structural requirements.

The bridge helped deliver droves of tourists to Healdsburg resorts that flourished for decades and became a link to a vacation paradise that stretched from the San Francisco area all the way to the Oregon border on the Redwood Highway.

"Along the Redwood Highway, there lies within easy access a most marvelous paradise wonderland of forest, river, mountain, lake and marine scenery," the Los Angeles Times wrote in 1928. "For either a quiet, restful vacation, or an active one, or for a most unusually interesting tour, you will find the Redwood Highway Empire the 'land where dreams come true.'"

The bridge itself became a focal point of summer fun. The community each year built a temporary dam just below the bridge to create a small lake for bathing and for events ranging from Amateur Athletic Union-sanctioned swimming meets and wine barrel races to holiday parades of festively decorated watercraft. Scores of spectators typically gathered on Memorial Bridge to watch the festivities.

The Healdsburg region is still a major tourist destination, although now due largely to the growth of the wine industry and the attraction of Michelin-starred restaurants. And while the bridge has been supplanted by nearby U.S. 101 as the main approach for tourist traffic, it remains Healdsburg's abiding structural symbol. Memorial Bridge is clearly visible from Highway 101 as visitors approach, a greeting from the community's past.

Memorial Bridge, along with 71 other California truss bridges dating back to the 1850s, was declared eligible in 1985 for listing in the National Register of Historic Places by the Keeper of the Register. The designation was ratified in 2004 under a Multiple Property Documentation form approved by the Keeper of the National Register.

The bridge meets the registration requirements of the Historic Bridges in California Multiple Property Submission because it illustrates the special skills of California bridge designers and builders in adapting steel-truss spans to differing road-construction challenges. In the case of Healdsburg Memorial Bridge, the Pennsylvania truss style represents a design that filled a particular need, beginning in the 19th Century, for bridges that could span broad crossings and stand up under strong loads. Memorial Bridge stands among the last of its kind still in vehicle use.

The bridge is thus worthy of listing under Criterion C, as a distinctive example of type, period and method of construction, with a period of significance of 1921. It is also deserving of listing under Criterion A, as an important element in the growth
