PARK VIEW TOWARDS DOWNTOWN

INTERPRETIVE GARDENS

The Slope Garden celebrates the history of horticulture in Los Angeles by portraying the transition of popular garden species from the past to present eras. The evolving popularity of various species and plant communities is representative of shifts in cultural value, from a proclivity towards an Old World (Mediterranean) aesthetic to a desire for exotic, imported species as symbols of status, and finally to an appreciation for the low water use, drought tolerant species best suited to the Southern California region.
