National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions.

1. Name of Property

DRAFT

Historic name: Talmadge Park Estates Historic District

Other names/site number: _____

Name of related multiple property listing: N/A

(Enter "N/A" if property is not part of a multiple property listing)

2. Location

Street & number: Roughly bounded by 44th and 49th Streets; Norma, Constance and Natalie Drives; Adams and Monroe Avenues

City or town: San Diego State: California County: San Diego

Not For Publication: Vicinity:

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended,

I hereby certify that this ___ nomination ___ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.

In my opinion, the property ___ meets ___ does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:

___ national ___ statewide ___ local

Applicable National Register Criteria:

___A ___B ___C ___D

_____ Signature of certifying official/Title:	_____ Date
_____ State or Federal agency/bureau or Tribal Government	

In my opinion, the property ___ meets ___ does not meet the National Register criteria.	
_____ Signature of commenting official:	_____ Date
_____ Title: State or Federal agency/bureau or Tribal Government

Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and non-contributing resources if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary Paragraph

Talmadge Park Estates Historic District is composed of single-family buildings and decorative wrought iron entry gates and is located in the Mid-City neighborhoods of San Diego, approximately seven miles northeast of downtown San Diego. The district sits on the Talmadge mesa that overlooks Mahogany Canyon and Fairmount Avenue Expressway to the west. Topography is generally flat, with a central canyon that divides the district into east and west sides. The west side is roughly one third the size of the district's total area. Streets within the Talmadge Park Estates are curvilinear, following the edge of the mesa to the west and becoming more rectilinear to the east. Other features include original streetlights, modest front setbacks, grass lawns, scored concrete sidewalks, mature vegetation, curb cuts, and driveways. The wrought iron entry gates along Monroe Avenue and 49th Street mark the south and east boundaries of Talmadge Park Estates Historic District and are original to the two underlying subdivisions. Resources in the district generally consist of one and two-story single-family

¹ The nomination uses the term New Traditional as per Virginia Savage McAlester, *A Field Guide to American Houses*. (New York: Alfred A. Knopf, 2013), 716-750.

County and State

residences designed in architectural styles reflecting the character of San Diego's early automobile suburbs and post Great Depression infill. The most common styles within the district are Spanish Colonial Revival and Minimal Traditional. There are several examples of other architectural styles that are compatible with the principal styles and represent early- and mid-twentieth century American movements. Contributing resources include single-family residences and decorative entry gates. Noncontributing resources postdate the period of significance or have been extensively altered and lack sufficient integrity. The district retains all aspects of historic integrity and conveys a strong sense of time and place.

Narrative Description

Location and Setting

Talmadge Park Estates Historic District is located in the Talmadge neighborhood of San Diego. The district is approximately 138 acres and essentially corresponds to the original boundaries that delineated the 1926 Talmadge Park Unit 3 (Map 1900) and 1928 Talmadge Park Estates Unit 1 (Map 2104) subdivisions.² The boundary is defined by Monroe Avenue on the south, 44th Street on the west, and 49th Street on the east. The homes on both sides of these boundary defining streets are included within the district. The north boundary is irregular and follows the contours of Highland Avenue, Max Drive, Aldine Drive, Norma Drive, Constance Drive, Natalie Drive, Adams Avenue, Miracle Drive, and Jean Drive. Homes on both sides of these streets are included in the district. The northeast corner of the boundary captures the first four properties on Lorraine Drive and the first three properties on 49th Street radiating out from the Talmadge Traffic Circle. The district is also bounded by the original gates that were placed around the edges of the two subdivisions as part of the initial improvements carried out by its developers, Roy and Guy Lichty. Other streets within the district include 45th Street, 47th Street, Euclid Avenue, 48th Street, Estrella Avenue, and Madison Avenue.

The district is laid out according to 1920s planning conventions and is consistent with other neighborhoods in San Diego developed during the same period. A combination of grid and curved streets are used to maximize land use and extend streets to the edges of the canyon bluffs. Street widths vary significantly within the district, Euclid and Adams Avenues are generous and wide while other streets like 44th and Highland Avenue are unusually narrow. Streets within the district are paved with asphalt and scored concrete sidewalks are present throughout.

Decorative wrought iron gates were constructed between 1926 and 1928 and formed the landmark entryways into the Talmadge Park Estates Historic District. Each gate is approximately ten feet wide, fifteen feet high, and painted black. They feature fanciful curves and shapes reminiscent of Andalusian fused ironwork.³ There is some evidence that there may have been additional gates in the past, especially at 44th Street where there are patches left in the sidewalk. The gates south of Monroe Avenue feature symmetrical arched frames and centered light fixtures that span the sidewalks (**Figure 1**). Gates east of 49th Street feature flat arched frames that span

² The Talmadge Park Estates Subdivision was also referred to as "Unit 4" in early advertisements.

³ City of San Diego, "Talmadge Gates Historical District," May 25, 2000, <https://sandiego.cfwebtools.com/images/files/CR-422.pdf> (accessed April 22, 2023).

County and State

the sidewalks and “giraffe neck” arms that support light fixtures (**Figure 2**). Original Marbelite streetlights also remain in the district, added at the same time as the gates; it appears that none have been removed.⁴ The district’s streetlights underwent restoration work circa 2009 and the district’s gates underwent restoration work circa 2014-2017.⁵

Parkway strips are present in roughly half of the district. They are concentrated in the center of the eastern portion of the district and were generally not included on the canyon side of border defining streets. Madison Avenue and some parts of Adams Avenue have wider park strips. The strips are typically landscaped with grass and a variety of trees and shrubs. Most of the parkway trees in Talmadge Park Unit 3 are palm trees.

Resources within the district are generally set back from the street at consistent depths and create cohesive streetscapes, especially along individual streets. Most are approached by a concrete walkway and steps that transect the yard and lead to the primary entrance. Landscaping varies widely and low perimeter or retaining walls are common. Several resources are obscured from the public right-of-way by perimeter fencing or hedges.

Single-Family Residential Resources

Except for one apartment building and one commercial building, Talmadge Park Estates Historic District consists otherwise of single-family residential buildings. John H. Lovett built eighty-three houses and The Dennstedt Company built fifty-eight houses within the district. Clear stylistic trends run through different areas in the district, because most builders constructed multiple homes and many of them drew inspiration from each other. By the mid-1930s, the designs were all influenced by Federal Housing Administration (FHA) guidelines. Resource footprints generally correspond to what is typical for their architectural style. U-shape, rectangular, and irregular footprints are common. All contributors are one or two stories.

The most common architectural styles are Spanish Colonial Revival and Minimal Traditional, which mostly correspond to the two distinct buildout phases of the district. The subdivision map for Talmadge Park Unit 3 was approved in March 1926; it delineated lots on the west half of the district up to Natalie Drive.⁶ Pre-Depression development was confined to 44th Street, Highland Avenue, and 45th Street, in the westernmost part of Talmadge. Resources constructed during this time were almost exclusively Spanish Colonial Revival style. At this point in San Diego’s development, Spanish Revival styles were associated with new, middle- and upper-class development and were the predominant style in Talmadge.⁷ A few Tudor Revival style resources were also built among the initial Spanish Revival style homes. Construction within the district almost stopped completely in the early 1930s. When construction picked up again in 1935, it was divided between Spanish and Minimal Traditional style resources. Minimal Traditional quickly became the most constructed style. In order to more easily qualify for FHA

County and State

loans and attract buyers, the builders maximized efficient use of space in smaller homes and highlighted their exterior details to make them look bigger than they actually were. Minimal Traditional homes soon filled the empty lots in the western portions of the district where construction had stalled at the onset of the Depression and moved east. Based on Notices of Completion documents, the eastern half of the district, between 47th Street and 49th Street, was filled within a few short years (1939-1941) with almost exclusively Minimal Traditional homes.

Most buildings within the district were constructed individually, as homeowners and builders purchased and filled lots. The same owner or developer would often erect two or more buildings concurrently, especially in instances when houses were built on speculation, which was a common practice in San Diego and the United States in the early decades of the twentieth century.⁸

Architects and builders were identified using Notices of Completion, San Diego County Lot & Block Books, building permit records, and newspaper advertisements. Historical records have indicated that over ninety individuals and firms were involved in the development of Talmadge Park Estates Historic District. Locally significant builders and architects known to have constructed homes in the district include The Dennstedt Company, Hays & Jackson, Chris Cosgrove, Charles H. Tifal, B.M. Torgerson, Louise Severin, O.U. Miracle, H.H. Preibisius & Son, Cliff May, and the Depew Building Company.

The district is notable as an example of San Diego's development as it moved through the early half of the twentieth century. It retains the look and feel of an early automobile suburb with distinctive 1930s, early 1940s, and postwar infill into the early 1950s. Visual harmony is achieved through the repetition of architectural styles, features, and materials. Sidewalks, gates, and streetlights further contribute to the district's sense of cohesion. The range of architectural styles within the district reflects the architectural patterns in the history of early automobile suburbs in the San Diego area.

Condition and Integrity

Talmadge Park Estates Historic District retains its historic appearance from its period of significance, 1926 to 1951. Characteristic elements of the district are largely intact. A majority of the buildings retain sufficient integrity to convey the district's historic significance.

Four hundred and nineteen resources, including four hundred eleven buildings and eight structures, date to the period of significance, and retain sufficient integrity to be classified as district contributors. One hundred seventy-three buildings were constructed outside the period of significance or have been significantly altered. These noncontributors do not detract from the district's integrity or its sense of time and place.

⁸ David L. Ames and Linda Flint McClelland. "Historic Residential Suburbs: Guidelines for the Evaluation and Documentation for the National Register of Historic Places," *U.S. Department of the Interior, National Park Services, National Register of Historic Places. National Register Bulletin*, September 2002, 26, https://www.nps.gov/subjects/nationalregister/upload/NRB46_Suburbs_part1_508.pdf (accessed April 22, 2023).

County and State

Buildings with few minor alterations that retain most of their original features were counted as contributors. Buildings were determined to be noncontributing when alterations obscured the original design intent, were not easily reversible, or significantly changed a building's appearance as viewed from the public right-of-way. These include significant changes made to original window openings; large additions to side or rear façades that compromise spatial relationships; the application of non-original materials that overwhelm or obscure the original design; and major changes to entry porches. Buildings were also classified as noncontributors if they incorporated a large number of lesser alterations, which together diminished the resource's integrity.

As a whole, the district retains all aspects of integrity. The district remains in its original location and retains integrity of *location*. Its setting, surrounded by neighborhoods of similar scale and age, has not significantly changed over time, so the district retains integrity of *setting*. Overall, the number of noncontributing resources is minimal, and alterations are not so prevalent or substantial that the district's integrity overall is diminished. The district therefore retains integrity of *design, materials, and workmanship*. With the relatively high number of contributing buildings and low number of noncontributing buildings, the district retains a strong sense of time and place from its 1926 to 1951 period of significance and thus retains integrity of *feeling and association*.

Architectural Descriptions

Architectural descriptions are organized alphanumerically by street name then by address number with buildings followed by objects. The order corresponds to a summary table of resources at the conclusion of this section. Buildings are described in terms of their date of construction, type, architectural style, basic form, cladding material, roof type and materials, and defining features.

Following the guidance of the National Park Service, single-family residences with detached garages and or accessory buildings are reviewed collectively as one resource because detached garages and accessory dwelling units are considered ancillary in form and function to the single-family residence.⁹ These ancillary buildings are acknowledged in the architectural descriptions. A secondary building's architectural incompatibility with the primary residence, especially in style and massing, is reflected in the contributor status of the resource. If a visible accessory dwelling unit is neither differentiated nor compatible with the original historic single-family residence, the resource as a whole is noncontributing.

Where known, original architects and/or builders are noted. City and County of San Diego Assessor Parcel Number (APN) is also provided.

County and State

A pair of gates on the east and west sides of Highland Avenue south of Monroe Avenue, marking the entrance to Talmadge Park Estates from the south. The gates have a flat arch frame crossing the sidewalk and an arched giraffe neck arm that supports a decorative light fixture. The gates are constructed of wrought iron and are approximately ten feet wide and fifteen feet tall. The architectural features include fanciful curves and shapes reminiscent of Andalusian fused ironwork. Designed by Frank R. Carlson, the gates were cast in 1927 at Union Machine Works in San Diego and refurbished circa 2014-2017 with period appropriate materials and fixtures.

586. Euclid Avenue south of Monroe Avenue APN: N/A Contributing Structure 1926-1928
Engineer: Frank R. Carlson

A pair of gates on the east and west sides of Euclid Avenue south of Monroe Avenue and north of the alley, marking the entrance to Talmadge Park Estates from the south. The gates have a symmetrical arch frame spanning the sidewalk with a decorative light fixture in the middle of the structure. The gates are constructed of wrought iron and are approximately ten feet wide and fifteen feet tall. The architectural features include fanciful curves and shapes reminiscent of Andalusian fused ironwork. Designed by Frank R. Carlson, the gates were cast in 1927 at Union Machine Works in San Diego and refurbished circa 2014-2017 with period appropriate materials and fixtures.

587. 48th Street south of Monroe Avenue APN: N/A Contributing Structure 1926-1928
Engineer: Frank R. Carlson

A pair of gates on the east and west sides of 48th Street south of Monroe Avenue and north of the alley, marking the entrance to Talmadge Park Estates from the south. The gates have a symmetrical arch frame spanning the sidewalk with a decorative light fixture in the middle of the structure. The gates are constructed of wrought iron and are approximately ten feet wide and fifteen feet tall. The architectural features include fanciful curves and shapes reminiscent of Andalusian fused ironwork. Designed by Frank R. Carlson, the gates were cast in 1927 at Union Machine Works in San Diego and refurbished circa 2014-2017 with period appropriate materials and fixtures.

588. Estrella Avenue south of Monroe Avenue APN: N/A Contributing Structure 1926-1928
Engineer: Frank R. Carlson

A pair of gates on the east and west sides of Estrella Avenue south of Monroe Avenue and north of the alley, marking the entrance to Talmadge Park Estates from the south. The gates have a symmetrical arch frame spanning the sidewalk with a decorative light fixture in the middle of the structure. The gates are constructed of wrought iron and are approximately ten feet wide and fifteen feet tall. The architectural features include fanciful curves and shapes reminiscent of Andalusian fused ironwork. Designed by Frank R. Carlson, the gates were cast in 1927 at Union Machine Works in San Diego. The west side gate was refurbished circa 2014-2017 with period

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B. Property is associated with the lives of persons significant in our past.
- C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

- A. Owned by a religious institution or used for religious purposes
- B. Removed from its original location
- C. A birthplace or grave
- D. A cemetery
- E. A reconstructed building, object, or structure
- F. A commemorative property
- G. Less than 50 years old or achieving significance within the past 50 years

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

Talmadge Park Estates Historic District is eligible for the National Register of Historic Places at the local level of significance under Criterion A in the area of Community Planning and Development representing an evolution of San Diego's suburban development in the wake of the Great Depression, into the incorporation of the Federal Housing Administration (FHA) small/minimum house principles for neighborhood planning, and through World War II housing shortage and construction restrictions. As an early automobile suburb, its location also became more easily accessible as the pattern for expansion reached beyond the city's center and into unincorporated areas to the east. Under Criterion C in the area of Architecture, the district embodies distinctive characteristics of style, type, and period of construction of the residential architectural trends of its era including Revival styles such as Spanish Colonial Revival; the small Ranch, which originated in this neighborhood; and Minimal Traditional. The subdivision also provided a means for local builders, a number of whom lived in the neighborhood, to apply early principles of FHA guidelines to infill lot development just prior to the city's influx of larger, master planned communities. The period of significance begins in 1926 when the district's streets were laid out, streetlights installed, and gates constructed and closes in 1951 when district buildout was essentially complete.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

Early History (Pre-History–1850)

The Kumeyaay, referred to as Diegueño by the Spanish, were the original native inhabitants of San Diego County and had lived in the region for over 10,000 years. For the majority of this time, Kumeyaay lands extended from the Pacific Ocean, south to Ensenada in Baja Norte, Mexico, east to the sand dunes of the Colorado River in Imperial Valley, and north to Warner Springs Valley.¹¹ The area remained undeveloped through the Spanish and Mexican periods of California even with the establishment of the Mission and military fortified Presidio of San Diego in 1769.¹² By 1845, the Mexican territory was facing threat of invasion by the Americans and the Mexican president issued a proclamation directing officers of the state to defend themselves. Under this order, Pio Pico, Alta California's last Mexican governor, sold most of the missions' land holdings to raise money needed to finance Mexico's defense. Governor Pico then granted the San Diego Mission, including its cattle and lands to San Diegan Santiago Arguella. The deed was recorded in 1846. Arguella, former Comandante of the San Diego Royal Presidio from 1830-1835, never occupied the previous mission lands, but his heirs retained ownership

long after Arguella's death in 1862.¹³ An official patent for the Ex-Mission was granted in 1876. The land on which Talmadge Park Estates Historic District sits was part of the Ex-Mission San Diego Alcalá granted to Arguella. The original mission holdings included what became the Kensington, Talmadge, Tierrasanta, Mission Valley, La Mesa, and San Diego State University neighborhoods, which were divided and sold over the years following California's statehood.

Speculative developers were interested in San Diego's large natural harbor, which was conducive to commerce and trade. One of the most successful investors in San Diego was Alonzo Horton. In 1867, Horton purchased 960 acres adjacent to the harbor and began to develop a modern city.¹⁴ He built a wharf and subdivided the land into gridded lots and streets known as Horton's Addition. The area would later comprise downtown San Diego, shifting the city's central core several miles away from its historic origins in Old Town.¹⁵ He began an aggressive promotional campaign to attract other developers to San Diego and within five years various new subdivisions were laid out around Horton's Addition. A two-year boom period occurred and then steadied thereafter until 1875 when the population dropped dramatically. Focus then turned to the railroad in hopes of luring others to invest in the town.¹⁶

Railroad and Local Streetcar Suburbs

By the 1880s, the transcontinental rail service arrived in San Diego and ushered a wave of new development and steady growth. The boom in San Diego led to the growth of additional local railroads expanding to areas north to La Jolla, east to southern farming districts in the county, and west to Coronado by winding around the bay.¹⁷ By the end of the 1880s, the population surpassed 35,000 and land investment and speculation created thirty new real estate tracts county-wide.¹⁸

New trolley lines branched out from the center core to adjacent areas north and east. Lines traveled from southeast San Diego up to the University Heights mesa, up Fourth Street to Normal Street, and east-west along the southern edge of Mission Valley.¹⁹ These first-ring subdivisions were the initial Streetcar Suburbs in San Diego.²⁰ New residents relied on the trolley lines to commute to and from the downtown business and commercial centers. This surge also provided new improvements including paving, electrical streetlights, railways, sewage

systems, and new construction. For a variety of reasons, the San Diego boom quickly went bust and the City's population settled to 17,000 by the 1890s.²¹

Steady growth continued into the dawn of the twentieth century as health and resort tourism brought more people to San Diego. The construction of the Panama Canal in 1903 initiated another surge in population due to San Diego's natural and commercial harbor. In celebration of the completion of the Panama Canal, the Chamber of Commerce indicated that San Diego would host the Panama California Exposition in 1915. An economic upswing resulted, and the city's population nearly doubled during this period. Growth was further accelerated by John D. Spreckels' downtown modernism campaign that brought on multi-storied concrete buildings. As downtown began to change, more families sought out residences within the first-ring streetcar suburbs that were created during the previous boom.²²

Suburban Expansion, the Automobile, and the Small House

By the 1920s, the early pioneers' vision of a thriving city was realized as San Diego's population doubled to nearly 150,000.²³ Growth was fueled primarily by the Navy's presence and activity in the region which resulted in the construction of several installations throughout the county from 1917 to 1930. To accommodate the growing population, new subdivisions developed in all directions from East San Diego to Pacific Beach.

Following World War I, improving the quality of American domestic life through home ownership, standardized home building practices, and neighborhood improvements were emphasized. The small house movement stressed the quality of design and construction in a compact, efficient layout, typically with no more than six rooms. These residences varied in architectural style depending on the region. The small house movement was further aided by the automobile industry, which meant that people spent less leisure time at home and thus required less living and entertainment space.

The automobile sales industry in San Diego during this period mimicked those occurring across the country. The automobile's popularity and ownership continued to reach new heights throughout the 1920s resulting in a decreased dependency on the trolley line. In addition to being faster than the electric streetcar, the automobile freed motorists from the fixed routes of rail-based transportation. This unprecedented mobility had a profound impact on urban form.²⁴ The automobile enabled commuters to expand beyond the first-ring neighborhoods into the outer areas of the city that were previously undeveloped regions too far from streetcar lines. These areas were ripe for development in the automobile era creating second-ring suburbs that were outside the bounds of the streetcar system.

County and State

In 1926, San Diego's El Cajon Boulevard was reclassified as U.S. Highway 80 causing automobile-oriented development along El Cajon Boulevard to increase. Many of these areas were just within the city limits or in unincorporated areas that were later annexed to cities. Subdivisions such as Talmadge, Redland Gardens, El Cerrito Heights, Redland Gardens Extension, and others surrounding El Cajon Blvd were mapped out by the mid- to late-1920s.²⁵ New residential tracts, some adjacent to major arterial streets such as El Cajon Boulevard, were established with the automobile in mind. These new subdivisions featured irregular streets patterns, sidewalks, and other capital improvements. Second-ring suburb residential growth included a garage as a standard feature of their residential properties. Previously, garages were typically small, separate buildings located at the rear of the lots, with access from an alley or a driveway running beside the house from the street to the rear of the lot. Efforts to enlarge and integrate the garage into the design of the house itself became more prevalent in the 1920s and 1930s.²⁶

Criterion A: Community Planning and Development

Early Development (1926-1934)

Brothers Roy and Guy Litchy were real estate partners. They developed four subdivisions. Two were located on the Kensington Mesa (Talmadge Park Units 1 and 2) and two on the Talmadge Mesa (Talmadge Park Unit 3 and Talmadge Park Estates Unit 1). They were geographically separated by Fairmount Canyon; therefore, the two Kensington subdivisions were not contiguous with the two Talmadge Mesa subdivisions.

In 1925, taking advantage of connections with Hollywood investors,²⁷ Roy Litchy was able to use silent screen stars, the Talmadge sisters (Norma, Natalie, and Constance), to promote the first subdivision (Talmadge Park Unit 1), which was dubbed the "Movie Girl Subdivision."²⁸ Talmadge Park Units 2 and 3 and Talmadge Park Estates Unit 1 share that origin story, which then became the legacy of all future subdivisions developed on the Talmadge Mesa.

Roy Litchy's original marketing strategy for Talmadge Park Units 1 through 3 was to bring Hollywood glamour and money to San Diego. The inclusion of Talmadge Park Unit 3 was based on a plan to build a bridge over Fairmount Canyon to connect Talmadge Park Unit 1 to Talmadge Park Unit 3.²⁹ The bridge was never built, and consequently, the western Talmadge Park subdivisions (Units 1 and 2) remained disconnected from the eastern Talmadge Park subdivision (Unit 3).

Talmadge Park Estates Historic District
Name of Property

San Diego, CA
County and State

The Talmadge Park Unit 3 subdivision map was filed in 1926. Lichty subsequently filed the Talmadge Park Estates Unit 1 map in 1928 adjacent to Talmadge Park Unit 3 on the Talmadge Mesa and joined the two subdivisions together with ornamental gates and streetlights along their non-canyon street subdivision borders.³⁰

The reason that the two Talmadge Mesa subdivisions have slightly different names has to do with who owned the land. According to Lot & Block Accessors Books, the Southern California Realty Corporation, with I.C. Freud, a Los Angeles capitalist, as its president, was the predominate owner of the lots in Talmadge Park Units 1, 2, and 3, whereas the Union Trust Company of San Diego was the primary landowner in Talmadge Park Estates Unit 1.

Shifting away from Hollywood glamour, the ongoing marketing of the combined subdivisions on the Talmadge Mesa focused on the unifying gates and raising families from cradle to college.³¹ As a result of the physical separation from the Kensington Mesa subdivision and further economic shifts due to the Great Depression, the newer subdivisions moved further away from the upper-middle class development in Kensington and instead developed into a neighborhood for working and middle-class families. These two socioeconomic divisions continue to exist.

Typical of subdivisions at this time, all the Talmadge subdivisions had deed restrictions. The *Talmadge Park Estates Homebuilders Guide* (**Figure 3**) stated, “Talmadge Park Estates is protected by sensible tract restrictions which will promote a neighborhood homogenous in character.”³² In addition, the deed restriction read, “That neither said premises nor any portion thereof shall at any time nor shall the interest therein ever be leased, sole, devised, conveyed to or inherited or be otherwise acquired by or become the property of any person other than of the Caucasian race.”³³ These restrictions were systemic racism and sadly were not unique. It was not until the U.S. Supreme Court’s landmark decision in *Shelley v. Kraemer* (1948) made racial covenants illegal.

The subdivisions’ real estate developers were brothers Roy and Guy Lichty.³⁴ Typical of this era, the Lichty brothers acquired land, filed a subdivision map with the city or county, and laid out streets and house lots. With Talmadge, Lichty promoted various site improvements including the construction of paved streets, curbs, sidewalks, water and sewer connections, electrical service, decorative gates, and streetlights.³⁵ The Lichtys, like other developers of their time, realized that if they initially built a few houses, it would help promote the development. This is evident in the Lot & Block Books records that reveal this initial homebuilding process for the Lichty brothers.

Talmadge Park Estates Historic District

Name of Property

San Diego, CA

County and State

In typical pre-World War II subdivisions, prospective homeowners would purchase an individual lot and hire a builder for the construction of the house. The builder worked by contract directly with the lot owner. These transactions were often recorded in Notice of Completion documents filed in the County Recorder's office. On occasion, some builders also purchased lots on speculation, constructing and selling houses for profit. Thus, the housing industry consisted of a large number of independent and/or small-scale contractors. These prewar tracts were primarily filled in with houses in a slow and irregular manner and had a wide range of construction dates.³⁶ They often exhibited a higher level of architectural variety and included an eclecticism of early twentieth century residential architectural styles including Period Revival styles.³⁷ This pattern of development can certainly be observed in the district and is evident in the number of Spanish Colonial Revival style houses throughout the neighborhood.

Spanish Colonial Revival style architecture remained popular for over a decade following the success of the 1915 Panama-California Exposition in Balboa Park, resulting in one of the greatest local building booms in San Diego.³⁸ This architectural style was the primary architectural style in the district from the establishment of the first subdivision until 1934, during the Great Depression.

By January 1927, over \$500,000 was invested in Talmadge Park Estates Unit 3.³⁹ A 1927 promotional advertisement states, "Unit 3 is well under way, with sewer system one-half complete and cement work, grading and water system being installed."⁴⁰ Included in these improvements were the characteristic acorn streetlights and decorative iron gates that were spread throughout the subdivision.⁴¹

The gates over the sidewalks that define the boundary and entryways for the district were constructed from 1926 to 1928, and were used as a key marketing tool to potential homebuyers.⁴² The gates provide a distinctive identity to the neighborhood and announce its primary points of ingress. The gated streets of Monroe Avenue and 49th Street define the southern and eastern boundaries of the district. These streets also define the city-designated Talmadge Gates Historic District (CHRID HRB #422).⁴³

Notices of Completion show that the first two full years (1927-1928) of development for Talmadge Park Unit 3 were steady, with a total of twenty-four single-family residences constructed. Most of these were located along the west end of the subdivision along 44th Street,

45th Street, Highland Avenue, Max Drive, and one on Norma Drive. These early properties were reflective of the popular Spanish Colonial Revival architecture that previously swept San Diego following the 1915 Exposition. Garages were detached and designed in a style consistent with the architecture of the main residence.

By 1928, the housing industry began to show some signs of slowing. As a result, Lichty launched an aggressive campaign to market the benefits of investing and living in Talmadge Park Unit 3. This began in 1929 with Lichty's partnership with early investor and business owner Mrs. Alma Staggs, who ran the Talmadge Tavern.⁴⁴ According to the City Directory in 1927, the Talmadge Tavern was located at 44th Street and Monroe Avenue at the western entrance to Talmadge Park Unit 3 and was, coincidentally, the first building constructed within the district in 1926. Lichty advertised free lunches and economic lectures at the Tavern on Sunday, Tuesday, Thursday, and Friday. These lectures were led by the nationally prominent economist, Captain Nelson G. Welburn. His lectures often addressed, "the intrinsic worth of real estate as the soundest of investments."⁴⁵

Lichty's campaigns took advantage of the proposed surrounding development and amenities in his Talmadge promotions in hopes of increasing lot sales. Marketing focused on Talmadge's proximity to every level of education and framed it as an idyllic place to raise children.⁴⁶ Planning and construction of adjacent elementary and high schools, which were within walking distance of the tract, were well underway.

An important boost came in 1928, when Talmadge Park Estates Unit 1 opened while San Diego State College was preparing to move across the canyon one mile northeast from the new subdivision. This inspired plans for the extension of Euclid Avenue through Talmadge by bridge over the Montezuma Canyon to connect to the newly established campus. Roy Lichty pursued the placement of increasingly ambitious plans for the greater Talmadge area in newspapers, including a business district in a Spanish Colonial revival style.⁴⁷ By 1929, Talmadge was promoted as the "Kindergarten to College" subdivision.⁴⁸ Neither the bridge nor the larger business district were realized as the realities of the economic downfall were imminent.

After the stock market crashed in 1929, triggering the Great Depression, housing construction declined precipitously, almost coming to a standstill. Notice of Completion records for Talmadge Park Unit 3 showed only two houses were built in 1929, following eleven homes built in 1928. Additionally, financial support from the original Los Angeles investors dried up. Although advertisements published by Lichty claimed otherwise, development in Talmadge Park Unit 3

continued to be slow for the next several years. Between 1930 and 1934, fewer than twenty new houses had been built within the district, including no reported construction in 1933 and only one house in 1934. In 1932, Cliff May built his first ranch house in his characteristic Hacienda style at 4725 Norma Drive (#569).⁴⁹

FHA Era and Wartime Build Up During the Depression (1935-1944)

As housing construction declined, discussion of the ideal small house took on new urgency with the collapse of the home building industry and the rising rate of mortgage foreclosures.⁵⁰ The 1931 President's Conference for the Design of Residential Neighborhoods established recommendations on reforming the nation's housing system. The primary objectives included creating a home financing program, improving the quality of moderate and low-income housing and residential districts, and stimulating the building industry. The conference culminated in the creation of a new national priority to lower American housing costs while improving their design and efficiency.⁵¹ The 1934 National Housing Act, which established the Federal Housing Administration (FHA), attempted to stabilize the housing market and expand opportunities for home ownership. Essentially the FHA was created to ensure the objectives of the President's Conference were realized through its approval of properties for mortgage insurance and the publication of housing and subdivision standards. In the following years, the FHA instituted a national program that regulated home building practices for many decades.⁵²

The FHA's *Principles of Planning Small Houses* first published in 1936 and revised in 1940, detailed a series of floor plans and features for small houses that offered "maximum accommodation within a minimum of means."⁵³ Each type was void of nonessential spaces, picturesque features, and unnecessary items that would increase cost. The simplest FHA design became known as the "FHA minimum house" later termed Minimal Traditional.⁵⁴ One story versions measured between 534 and 624 square feet and were designed for a family of three adults or two adults and two children. It included a kitchen, multi-purpose living room, two bedrooms, and one bathroom. Less popular were two-story homes that included bedrooms on the upper floor. The 1940 revised publication was more flexible and allowed for expandability to accommodate growing families and could include additional features such as gables, porches, roof types, windows, shutters, and fireplaces.⁵⁵ FHA guidelines also placed emphasis on marketability and maximizing resale value for new residential construction.

Revised mortgage financing by the FHA was provided to potential homeowners in order to make housing more affordable and available to a larger number of Americans. By reducing down payments and providing longer loan terms for the home buyer, lenders were spurred to make

more loans. By making mortgage financing accessible, FHA stimulated demand which led to a revival of the building industry and increasing the rate of home ownership.⁵⁶

Following the establishment of the FHA, architects and builders relied on its support to stay in business during the late 1930s and enthusiastically embraced small house design. Builders knew that following FHA guidelines was the quickest way to ensure construction funds and home purchase mortgages for their projects. Professional journals talked extensively about floor plan efficiency and strategies for reducing costs; house plans and pattern books for homes that met FHA criteria were widely published.

As the building industry began to slowly resume in the wake of the FHA, Talmadge Park Unit 3 obtained San Diego's first approved building loan under the FHA in 1935. The application was for a new-construction loan for retired US Navy Lt. James A. Newell at 4720 Norma Drive (#567). The Spanish Colonial Revival home was completed by Master Builder Louise M. Severin in June 1935 and was ruled new construction for the purposes of the FHA loan.⁵⁷ Severin was one of the earliest known female builders in San Diego and is known to have built six houses in the district.⁵⁸

Concurrent to the uprise in FHA building efforts, Guy Lichty convinced residents to apply for annexation to the city in 1935 as Talmadge was still located in the unincorporated area at the east end of the city limits. With the annexation complete in 1936, it enabled the subdivisions to partake in the city's municipal amenities such as water, garbage, fire and police protection, and other civic benefits, thus, attracting more interest from builders and potential homeowners. According to Guy Lichty, "So general is the demand for homes in Talmadge Park, unit 3, now that it is part of the city, six of the community's leading building-contractors are putting construction crews into the tract. They are the Dennstead Co. [*sic*], W.E. and Louise Severin, Anderson & Johnson, W.W. Erdmann, Johnny Lovett, and R.C. Brock. Other builders will naturally have crews in action in short order."⁵⁹ To accommodate new home buyers, Lichty expanded his office to provide advisory services on home-buying and building, as well as understanding FHA financing.⁶⁰

The 1936 increase in development caused the Lichtys to plan an enlargement of their office in a neighboring community.⁶¹ According to Lot & Block Books and the City Directories, by 1939, Guy Lichty had moved their real estate office to the entrance of Talmadge Park Estates Unit 1 at the corner of Monroe Avenue and Euclid Avenue. The building still exists at that location.

County and State

Within the district, building construction picked up to forty-two homes built in 1936 with twenty-one designed utilizing the FHA's Minimal Traditional style for the first time. The following year, the construction numbers increased to sixty-six, nearly doubling from the year before. Construction peaked between 1939 and 1941 with 314 residences completed in the two subdivisions.⁶²

In 1939, Talmadge Park Estates 1 was formally opened for development.⁶³ Although advertising for Talmadge Park Estates Unit 4 began in the late 1920s, the subdivision's formal opening was delayed for a decade due to the Great Depression. To commemorate this opening and ongoing record sales, the *Talmadge Park Estates Homebuilders Guide* was published outlining everything a potential homeowner should know about the subdivision, its builders, and the FHA loan insurance program information.⁶⁴

One of the vital steps toward acquiring a home of your own is the selection of the best plan of financing for your own particular needs. Homesites in Talmadge Park Estates have been approved by F.H.A. building and loan associations, banks, life insurance companies, and other lending agencies as highly desirable for maximum loans. Never in the history of home building has such low interest, long-term financing been available.⁶⁵

In addition to the FHA-insurance loan program of 1934, the local aerospace industry had a big impact on the Talmadge Park Estates Historic District's development. Due to the build-up to World War II, the U.S. began to expand its defense system and resources were funneled to military bases and aerospace production plants. In October 1935, Consolidated Aircraft moved from Buffalo, New York to San Diego. According to the president, Reuben H. Fleet, Consolidated Aircraft was bringing \$9 million of unfilled orders to its new plant. Fleet was also predicting that Consolidated would need to hire approximately 5000 employees within a year of relocating to San Diego. During this time, they needed to recruit workers from other cities to meet their manufacturing needs. This created an influx in housing requests that the FHA builders in the district helped to meet. By the beginning of World War II in 1941, Consolidated employed 25,000 workers.⁶⁶ According to City Directories, a large number of military men, women and aerospace factory workers lived in the district during this period.

Due to the Depression's negative impact on development, the FHA and the build up to World War II, Minimal Traditional homes became "the little house that could."⁶⁷ This was certainly how Talmadge Park Estates Historic District's development was impacted. Also due to the Great Depression, Talmadge Park Estates Unit 1 did not start its build out until the middle of 1939.

San Diego, CA

County and State

By 1942, the War Production Board prohibited non-essential construction to conserve labor and building materials for the war effort. This event severely curtailed market-driven housing construction for the duration of the war.⁶⁸ In Talmadge, Notices of Completion show that construction went from 103 completed projects in 1941 to sixteen completed projects in 1942. No houses were built in 1943 and only one house was built in 1944. Both the prohibition of construction and dwindling number of undeveloped lots in the district contributed to the end of Talmadge's prewar building boom.

Postwar Buildout (1945-1951)

The prohibition on market-driven housing was lifted when World War II ended in 1945. By the postwar period, Talmadge was close to fully developed with only thirty-four new residences added between 1945 and 1951. As the few remaining lots were infilled, new homes continued to follow many of the architectural conventions of the Minimal Traditional style, even as the Ranch style was becoming more common elsewhere. Because lot sizes in the district were planned decades before, they were not large enough to accommodate the needs of the postwar sprawling Ranch style homes, thus limiting their construction in the district. By 1951, 99% of the homes in the district had been built.⁶⁹ The handful of houses that were built afterward were representative of Ranch or Mediterranean styles.

Criterion C: Architecture

Talmadge Park Estates Historic District is a cohesive 1920s to early 1950s single-family residential neighborhood with good physical integrity that strongly conveys its significance as an excellent collection of architectural trends that span popular styles of its era such as Period Revival architecture, Ranch, and Minimal Traditional. From the construction of the first house, the district experienced the economic ups and downs of the development build-out from 1926 to 1951. By far the most intense development period was during the late 1930s and early 1940s. These houses were predominately in the Minimal Traditional styles.

Talmadge also provided a space for experimentation with modern design concepts, such as the Ranch style, which had its modern beginnings in the district. More than any other designer, builder Cliff May, son-in-law to Roy Lichty, developed and popularized the Ranch style, with his first house built in 1932 on Norma Drive. As a sixth generation Californian, of Hispanic descent, May grew up in San Diego and was inspired by the old Spanish and Mexican adobe buildings he was exposed to while visiting family as a child. In his early career, he crafted Monterey style furniture and seeking an appropriate setting to showcase his creations, May began designing and building houses for them. By 1937, May had designed and built nearly fifty homes in the San Diego area, before relocating to Los Angeles.⁷⁰ The early Ranch style created and popularized by May, often identified as "Hacienda" or "California Ranch,"⁷¹ influenced several other builders in the district to construct homes utilizing the same style or layout, using a

County and State

more modest scale and detailing. The district contains nineteen of these California Ranch houses. These homes, many of which were built by The Dennstedt Company, are often confused with Cliff May houses.

Because the subdivision was already established and partially developed by the time FHA support was available to the industry, it was attractive to both builders and homeowners as a low-risk investment. The FHA guidelines encouraged builders to develop and adapt innovative solutions for providing residential buildings on a moderate scale using infill lots, thereby creating what became a precursor to the later tract house. The Talmadge subdivision builders during this era were able to conceive a systematic solution to mass producing the Minimal Traditional home on varying empty lots in the neighborhood in a short period of time. This is evident in the large numbers of these residences constructed in the span of three years within the district. It appears these practices were passed down as larger master planned neighborhoods were later developed.

The Talmadge Park Estates Historic District is also important for its high concentration of residents involved in the building industry during and following the Depression. At least thirteen building contractors were known to have lived and worked in the district. The six most prolific builders in the district all had principal owners who were also residents: John H. Lovett, The Dennstedt Company (Edward W. Dennstedt, Arthur Dennstedt), Cooley & Grizzle (Harold W. Grizzle), Charles H. Wilkinson, Hays & Jackson (Richard Jackson), and Chris Cosgrove. Additionally, Scott King of Tifal & King, LeRoy Preisibius of H.H. Preisibius & Son, Lawrence Michel, and Orville U. Miracle lived and worked within the district. A review of city Directories and Notices of Completion show that many of these builders were living in the district in the mid-1930s through the postwar period while they were completing projects in the neighborhood. Clearly, they all recognized the potential possessed by the district and built homes for themselves and others. The district also served as a unique cross section of the work that local, independent architects and builders were able to produce as they adapted to the changing circumstances of the building industry as it moved from the late 1920s into the 1950s.

The district's period of significance ends in 1951 when it was essentially built out and its architectural character had been achieved. Five of the district's buildings have been locally designated as San Diego Historical Resources based on their architectural and historical merit, in addition to the local designation of a historic gates district.⁷² Based upon Talmadge Maintenance Assessment District records, there are 141 surviving original historic streetlights and eight pairs of historic gates within the district.

Period Revivals

In San Diego, eclectic and revivalist architectural styles became popular starting in the early twentieth century. Examples of many styles including Colonial, Tudor, Dutch, French and Italian Renaissance can be found in neighborhoods across the city. Spanish Colonial Revival, also known as Spanish Eclectic, was the most numerous and had the most significant impact on the city's architectural landscape. Within the district, examples of Colonial Revival, Tudor, and

⁷² City of San Diego, "Talmadge Gates Historical District."

Talmadge Park Estates Historic District

Name of Property

San Diego, CA

County and State

Spanish Colonial Revival style resources remain evident. These styles were primarily built between 1926 and 1934. Of these examples, the vast majority were built in the Spanish Colonial Revival style.

Spanish Colonial Revival

Popularized by the Panama-California Exposition in 1915, this style was most common between 1915 and 1940. The lead architect of the Exposition, Bertram Goodhue, became enamored with Spanish Colonial and Moorish architecture on trips to Mexico and Persia. His Exposition building designs blended elements of Spanish missions and churches and of palaces in Mexico, Spain, and Italy. Goodhue is also credited for designing the Marine Corps Recruit Depot in 1923 in the same style. Following extensive publicity of the exposition, a simplified expression of Goodhue's revival style quickly became one of the most widespread architectural styles in San Diego. Master Architects Richard Requa, Thomas Shepherd, Herbert Mann, Frank Mead, Herbert Jackson and William Templeton Johnson, and Master Builders Louise Severin, Ralph Hurlburt, and Charles Tifal contributed significantly to San Diego's heritage of Spanish Colonial Revival architecture.⁷³ Examples of Severin and Tifal's work in the style are located in the Talmadge Park Estates Historic District.

Character defining features for this style include:⁷⁴

- Low pitched/ flat roof, usually with little or no eave overhang
- Red tile roof covering
- One or more prominent arches above entry door or principal window
- Arches above doors, principal windows, or beneath porch roofs
- Stucco wall surface; tooled or smooth surface
- Asymmetrical façade
- Doors emphasized by adjacent columns, carved stonework, patterned tiles, etc.
- Doors leading to exterior gardens usually paired and glazed with multiple panes
- At least one large focal window
- Decorative window grilles
- Fountains
- Walled entry courtyards
- Arcaded walkways

Colonial Revival

Colonial architecture itself was based on European styles colonists brought with them to North America. The popularity of Colonial Revival styles began after American Centennial celebrations in 1876. It again gathered popularity after the first World War and tailed off in the 1940s. Each time, it was spurred by renewed national pride and used by fashionable architects for wealthy clients. Early versions in San Diego were built at the turn of the century by those

⁷³ Ibid, 21.

⁷⁴ McAlester, *Field Guide to American Houses*, 189.

Talmadge Park Estates Historic District

Name of Property

San Diego, CA

County and State

who could afford large pieces of land outside of the city.⁷⁵

Character defining features for this style include:⁷⁶

- Rectangular shape
- Symmetrical façade, often with side porches
- 1-3 stories
- Gabled or hipped roof with narrow overhang, medium pitch
- Windows: Multi-pane, double-hung with shutters, bay windows
- Entrance: Centered and prominent with columns, pilasters, or extended pediment to create a covered porch; fanlight or transom, sidelights, paneled door
- Brick or wood clapboard siding exterior
- Dormers, classical columns, two-story pilasters or quoins at corners, and dentils under eaves

A principal substyle of the Colonial Revival style is the Cape Cod. This substyle was widely published in home magazines in the 1930s and 1940s. Many favored its New England folk-house form and reference to colonial America. Cape Cod houses, including examples in the district, are typically one story with a side-gabled roof. They are often symmetrical, although experimentation with asymmetrical elements is common.⁷⁷

Tudor Revival

Tudor style architecture was loosely adapted from a variety of late Medieval and early Renaissance English prototypes, including anything from thatched roof cottages to grand manors. The revival of English domestic architecture gained momentum in the late nineteenth century in both the United States and Great Britain. Generally, American Tudor Revival style buildings are united by an emphasis on steeply pitched, front facing gables. In the twentieth century, Tudor Revival homes became less stately and began to feature half-timbering more prominently. The style's popularity exploded in the 1920s as masonry veneering techniques improved. Tudor Revival style architecture varies widely in materials and detailing, and regional substyles are common.⁷⁸

Character defining features for this style include the following:⁷⁹

- Large chimneys
- Façade dominated by one or more front-facing gables
- Decorative half-timbering (about one third of examples)
- Front door or entry porch with round or Tudor arch
- Tall, narrow windows, commonly in groups and with multi-pane glazing

Mid-Century Period

In San Diego, both Moderne and Minimal Traditional styles were popular during the cautious 1935 to 1945 Depression and war years. Modernism did not fully emerge until the post-War burst of prosperity and the resulting construction boom; but some Modernist examples had already appeared in the mid-1930s. Not all San Diego architecture after 1945 was Modernist; however, after 1945 most residential architecture relied on traditional stylistic treatments on slightly newer house forms such as Ranch.⁸⁰

Minimal Traditional

Minimal Traditional became the dominant architectural style in Talmadge by 1937 and continued as the primary architectural style throughout the remainder of the buildout of the district. Within the Minimal Traditional style, the key subtypes that apply to Talmadge include Streamline Moderne and Colonial Revival.

The Minimal Traditional home was created in response to the introduction of the Federal Housing Administration (FHA) program in 1934, which restarted homebuying as the United States, including San Diego, recovered from the Depression. The FHA published guidelines (Principles of Planning Small Houses) that encouraged the efficient use of materials and space to provide the greatest value to the homebuyer.⁸¹ The compact footprints of Minimal Traditional homes also fit Talmadge's narrow lots.

Construction of Minimal Traditional homes also coincided with the war effort, and San Diego was an exceptional example of this trend. Already home to pioneering aircraft manufacturers, such as Ryan Aircraft, San Diego's aerospace industry had a major boost in 1935 when Consolidated Aircraft relocated from Buffalo, New York, to San Diego.⁸² The combination of the FHA program and prewar industry produced a housing boom in Talmadge. From 1935 to 1942, over eighty-six percent of the houses in Talmadge were constructed, mostly in the Minimal Traditional style.

To add variety and show off the craftsmanship of the builder, Minimal Traditional homes often had signature rafter tails, scalloped siding details and porch covers, distinctive wood attic vents known as "bird nests," patterned railings, and other details.

The interiors of these houses also reflected the skill of builders with arched and detailed room dividers, beautifully tiled kitchen and bathrooms, and built-in bookshelves and storage. Simplicity and modernity were reflected in the use of Art Deco style bathrooms and kitchens.

⁸² City of San Diego. "San Diego Modernism Historic Context," 30.

Talmadge Park Estates Historic District

Name of Property

San Diego, CA

County and State

Character defining features of Minimal Traditional houses include:⁸³

- Simple, compact massing
- Low-pitched cross-gabled, hipped, side-gabled roofs with shallow eaves and exposed rafter tails
- Stucco or wood wall covering, often in combination
- Brick or stone accent cladding, as foundation skirt, half-wall, bay window bullnose, or less commonly, as an accent wall
- Most commonly one story
- Small entrance porch or stoop
- Wood front door, typically paneled
- Bay windows with brick or stone bulkhead
- Double hung or casement secondary windows, usually wood
- Small accent windows
- Fixed multi-lite picture windows
- Ornamentation of gable siding, porch covers, and wood attic vents

Ranch

There are both early examples of ranch houses in Talmadge, as well as later examples that were built in the 1960s after the period of significance. The style is loosely based on early Spanish Colonial architecture in the American Southwest. Sprawling Ranch style homes were made possible by increasingly large lot sizes that became more common with the rise in automobile ownership. The style was introduced to the nation when Cliff May published his book *Sunset Western Ranch Houses* in 1946. It included some of his own designs for modern interpretations of Spanish Colonial residences. Ranch style design gained popularity in part due to its reputation as an approachable and casual modern style.⁸⁴

Character defining features of Ranch houses include:

- Informal, asymmetric façade
- Broad low one story
- Attached garage
- Moderate to wide eave overhangs
- Sheltered entry
- Wide picture windows
- High, horizontal secondary windows
- Built low to the ground
- Stucco, board and batten, and lap siding
- Brick half walls⁸⁵

Substyle: California Ranch/Hacienda/Spanish Ranch

An early substyle of Ranch architecture was developed and popularized by architect Cliff May. His early works were all in the California Ranch substyle, which drew inspiration from the pitched-roof Spanish Colonial homes of Southern California.⁸⁶ This style was most common in California and the Southwest and was constructed from 1930s-80s. May first introduced this Hacienda home in Talmadge in the 1930s at 4725 Norma Drive (#569).⁸⁷

Character defining features of California Ranch houses include:⁸⁸

- U-shape floorplan wrapped around a veranda
- French doors and concrete floors connecting indoor and outdoor spaces
- Rough-hewn garage doors, shutters, and window grills
- Garage attached to the house beside the primary facade of the house
- Typically clay tile roof, including stacked tiles with visible mortar
- Low profile chimneys
- Gated entrances with limited visibility from the outside
- Floorplans adapted to pie-shaped, narrow, and other irregular-shaped lots

Streamline Moderne

Streamline Moderne (also known as Art Moderne) first gained national attention when architect Eliel Saarinen submitted his modernist design to the 1922 *Chicago Tribune* design competition for a headquarters building. Around 1930, streamlined industrial designs began to gain popularity and influence other industries.⁸⁹ The district contains thirty-two homes in the Streamline Moderne style built between 1934 and 1945.

Character defining features of this style include:⁹⁰

- Curved corners
- Horizontal grooves, lines, balustrades
- Windows that turn corners
- Smooth stucco wall surfaces
- Asymmetrical façade
- Flat roof

Architects and Builders

Buildings in the Talmadge Park Estates were often designed-built by numerous architects and builders rather than by a single developer. Most commonly, permits and/or Notice of Completions reflected that the buildings were designed and/or built for the owner by a contracted builder. Some properties were purchased on speculation by local builders and then sold for profit. In other cases, multiple buildings were designed by a single architect/designer or constructed by a single builder, reflecting the general pattern of single-family homes being erected in this area for owner occupation. Architects' names on original construction permits or Notice of Completions for the district's buildings were less common than owner/builder names.

These historic records also show that many of the subdivision's builders constructed more than one residence. These notable practitioners were regarded for the quality and/or number of their projects within the boundary of the district. Firms such as those headed by Lovett, Dennstedt, and Cooley & Grizzle lead the number of built residences in the area numbering over 50 each. Lovett alone was credited with over eighty projects in Talmadge.

Many of these firms were established builders when the stock market crashed in 1929 sending the financial and building market plummeting. With the onset of FHA guidelines and the pressing need for homes, these builders had to adapt quickly to the changing built environment.

The following is a discussion of the most notable architect/designer and builders, listed in order of productivity within the district.

John H. Lovett, Builder/Resident⁹¹

John Harold Lovett was born in 1897 in Colorado Springs, Colorado. Upon being discharged from the Navy, he started his career as a realtor, then developed an interest in carpentry and started a supplemental career building homes in 1927. During this time, Lovett utilized a state loan program that was in place to construct affordable housing for veterans.

Although he sometimes constructed homes for civilians, he continued to focus on veteran housing until his career ended in the 1960s. Lovett's cumulative knowledge of real estate, financing, veteran benefits, and construction allowed him to effectively use incentives offered by the Veterans Welfare Board. He played an important role in the growth and development of Talmadge and built eighty-three homes within the district, many of which are in the Minimal Traditional style. Lovett is responsible for the most houses of any builder in the district.

In 1930, John Lovett also partnered with Benjamin Torgerson, a local Master Builder. They served together on the San Diego Building Contractors Association and were both instrumental in promoting the building industry during the Depression as well as during the building boom of the 1940s.

⁹¹ Paul and Sarai Johnson, "The John H Lovett Spec House No. 1.," City of San Diego Historic Designation Report, 2020, 10, 28-32, <https://sandiego.cfwebtools.com/images/files/CR%204351%20Bancroft%20Street.pdf> (accessed April 22, 2023).

John Lovett lived with his wife Lucille at 4715 49th Street (#149) in the district. Lucille worked as a bookkeeper and salesperson for her husband's construction company. John was a resident from 1939 until his death in 1965 and Lucille remained there until her death in 2003.

The Dennstedt Building Company, Builder/Resident⁹²

The Dennstedts are important to the history of San Diego, having built many single-family residences, commercial buildings, and apartments from the 1920s through the 1940s. Seven different companies associated with the Dennstedt family were established between 1926 and 1988, three of which were identified as Master Builders by the San Diego Historical Resources Board.

Brothers A.L., C.A., E.L. and A.E. Dennstedt, moved to San Diego from Minnesota in 1926 and established The Dennstedt Company. The company specialized in custom Spanish Eclectic style houses and developed a reputation for hiring skilled craftsmen and retaining them long-term. By 1929, The Dennstedt Company had built hundreds of houses and were advertising themselves as the largest homebuilder in San Diego. They adopted the business strategy of buying vacant lots in existing subdivisions, finding buyers who were willing to contract with them to build a house on the lot, and offering clients financing for both the lot purchase and home construction costs. In this way, they became prolific builders of custom houses.

In 1933, A.L. sold his interest in the company as a result of a dispute with his brothers, likely over whether to enter the tract housing market and work with low-cost FHA loans. Joined by his brother A.E. in 1934, they continued to build custom houses, using their method of selling lots to clients who were willing to contract with them to build their houses. They never built tract housing. They eventually began building speculation houses for clients with FHA loans. The company lasted until 1941, at which point residential construction largely stopped as America entered World War II.

C.A. and E.L. Dennstedt took over the original branch of the company. They benefitted from FHA funding made available in response to the housing shortage, as well as from a building boom that began around 1936. They also continued selling lots to clients who agreed to contract with them to build houses. In the late 1930s, they changed their company name to "The Original Dennstedt Company" to differentiate themselves from the "A.L. and A.E. Dennstedt Building Company." They also began building minimal traditional FHA tract housing. Their work from this period was still of a high quality although they did not reach the same level of style and attention to detail as their earlier custom houses. After World War II, the company shifted to building in modernist styles.

As highlighted in the *Talmadge Park Estates Homebuilders Guide*, the Dennstedts were significant Talmadge builders. According to Notices of Completion, the various Dennstedt Companies constructed fifty-eight houses in the district. Their body of work includes the Edward

County and State

and Gertrude Dennstedt Residence, built in 1936 at 4615 Norma Drive (#532). The Spanish Ranch style house is locally designated as a historic resource. Edward Dennstedt and his wife Gertrude lived in the house from 1936 until 1946.

Edward's son, Arthur Dennstedt, was the superintendent of The Original Dennstedt Company. He built and lived in another Spanish Ranch style home at 4525 Norma Drive (#510). Arthur and his family lived there from its construction in 1937 until 1944.

Cooley & Grizzle, Builder/Resident⁹³

According to the Notices of Completion and City Directories, George E. Cooley & Harold W. Grizzle are responsible for the construction of forty-eight homes within the district. They were active in the neighborhood from 1937 to 1948. Harold W. Grizzle lived at 4505 47th Street (#51) from 1941 to 1946.

In the early 1930s, prior to his partnership with Grizzle, Cooley was partners with the locally designated Master Builder Benjamin Torgerson. Torgerson himself built five homes within the district following their split. Cooley and Torgerson had pooled their resources to continue building custom Spanish Eclectic style homes for wealthy clients when the building industry slowed due to the Depression.

Charles H. Wilkinson, Builder/Resident

Census records and City Directories show that Charles Howard Wilkinson was born on March 28, 1893, in Chicago, Illinois. He trained as a carpenter and moved to San Diego with his wife Edna in the early 1930s. Charles and Edna first appeared in San Diego City Directories in 1934. Upon completing 4676 Adams Avenue (#153) in 1937, Wilkinson and his family moved into the residence.

As highlighted in the *Talmadge Park Estates Homebuilders Guide*, Wilkinson was a significant Talmadge builder. Notices of Completion show that between 1938 and 1941, Wilkinson built twenty-six Minimal Traditional homes within the district. In 1948, he built two more homes. Historical research did not reveal when Wilkinson moved out of Talmadge however, it appears that sometime between 1943 and 1947, he moved to the South Park neighborhood of San Diego. Charles died on May 4, 1957, in San Diego. He and his wife are buried at Fort Rosecrans National Cemetery.

Hays & Jackson, Builder/Resident⁹⁴

San Diego, CA

County and State

Locally designated Master Builder Carl B. Hays was born in Ohio in 1884. He moved to San Diego in the early 1920s. In the 1923 San Diego City Directory, he is listed as a partner in the real estate firm Hays, Howard & McCoy, along with C. E. Howard and E. L. McCoy. Hays and McCoy remained partners until 1924. This was likely the period when Hays and McCoy perfected their signature floor plan that they used in Kensington, Talmadge, North Park, and many other communities. The 1928 San Diego City Directory listed Hays and his wife as owning a real estate company. In 1936, he partnered with Richard M. Jackson to start the firm Hays & Jackson. Their partnership lasted until Hays' retirement in 1942.

Several advertisements in the *San Diego Union* during Hays' career characterized him as one of the influential builders in the nearby upscale neighborhood of Kensington Heights. He was included in a 1937 photograph of industry leaders such as A.L. & A.E. Dennstedt, Henry F. Landt, R.S. Brock, John Lovett, Raymond Perrigo, Lawrence Michael, Van Brady, and George Forbes. According to Notices of Completion, Hays and Jackson built twenty-four houses within the district. Richard M. Jackson lived in the district and Carl B. Hays built a house for his son, who, according to the City Directory, worked for his father's company.

Chris Cosgrove (Jenkins Construction Co.), Builder/Resident⁹⁵

Jenkins Construction constructed homes in the district from 1937 to 1947. The company was owned by Bernard F. Jenkins (1891-1981). Jenkins was an officer in the US Navy and president of the Building Contractors Association. In the early 1960s, he headed Belleview Center Company, a real estate development business specializing in commercial properties.

Locally designated Master Builder Chris Cosgrove worked for the Jenkins Construction Co. from 1939 to 1946. His responsibilities included being a salesman, draftsman, and manager. In 1941, while working for Jenkins Construction Co., Cosgrove built and lived at 4701 Madison Avenue (#325) within the district. In 1942, while working for Jenkins Construction Co., Cosgrove also built the locally designated house at 4825 Adams Avenue (#164).

Charles H. Tifal⁹⁶

Charles Tifal was born in Wisconsin in 1882 and relocated to San Diego circa 1920. Beginning in the early 1920s, Hurlburt and Tifal designed and constructed buildings, primarily high-end custom residences, in a myriad of styles including French Eclectic, Spanish Eclectic, Arts and Crafts, Tudor, Italian Renaissance and variants with North African and American Pueblo territorial design elements. In 1942, Tifal was no longer working with Hurlburt and was partnered with Scott King. Tifal & King built the Alvarado Road Pump House, cottage, and garage. Tifal died at age 86 in February of 1968.

G. F. Samuel & Son⁹⁷

G. F. Samuel & Son were a father and son building company. Gilbert F. the father and Gordon F. the son. Gilbert was born in Missouri in 1887 and Gordon was born in Missouri in 1911. Gordon shows up working with his father in the San Diego City Directory in 1937. Their partnership lasted until 1942. During that five-year time span, they built twenty houses in the district, in the Minimal Traditional and Streamline Moderne styles. They are also featured in the *Talmadge Park Estates Homebuilders Guide*. Gordon did not live in the district while he was building out the neighborhood. He did move back in 1947 into a house he had built in 1940. He remained there until 1960.

Once WWII began, Gordon ended the building partnership with his father and went to work in the aircraft and defense industry to support the war effort. After WWII, Gordon went into the oil well business in Oklahoma and Texas with his childhood friend and TV celebrity, Art Linkletter. Gordon died in 1995 at the age of 84. His father, Gilbert, died in 1954 at the age of 65.⁹⁸

Anderson and Johnson⁹⁹

Robert A. Anderson and Leonard Johnson built sixteen houses within the district. They advertised as Anderson & Johnson in the 1924 classified section of the San Diego City Directory. According to the San Diego Directories, they remained partners until the 1970s. Frequently builders, either together or separately, bought lots, built on them, and then sold them upon completion. Two of their residential properties have been locally designated in Kensington.

Robert Anderson's parents immigrated from Denmark and became naturalized citizens in 1894. The 1920 Census shows Robert and his brother Willie as living with their parents in Buse, Minnesota. Both brothers' occupations were listed as "general carpentry" in that census. Willie later worked for his brother. In 1927, Robert married Cora and they lived at 4745 Hawley Boulevard, the business address listed in the *Talmadge Park Estates Homebuilders Guide*. The family lived there until at least 1939.

Leonard Johnson was born in Sweden in 1892. In 1913, he immigrated to New York City. In 1924, he appeared in the San Diego Directory at 1811 Adams Avenue, with his work association listed as Anderson & Johnson. By 1926, Johnson was married to another Swede, named Helga, and they lived on Marlborough Drive in Kensington with their two children.

In 1948, Johnson designed and built their home in Kensington on 4343 Ridgeway Drive, an individually designated historic resource listed on the City of San Diego's Historic Resource Register. The home is an early example of a custom Ranch style home. Johnson and Helga lived

there until their deaths, Helga in 1976, and Leonard in 1980. Their son inherited the residence and sold it in 1982.

Stallard & Oates¹⁰⁰

Stallard & Oates are featured in the *Talmadge Park Estates Homebuilders Guide*. They built ten homes within Talmadge between 1938 and 1941, during the major building boom. William B. Stallard was born in Omaha, Nebraska in 1896. His father was a real estate agent, and his mother was a housewife born in Wales. His WWI draft card listed him as an electrician for the Western Pacific Railroad. By 1923, Stallard was living in San Diego. In the mid-1920s he worked for a builder who was the son of Master Builder Martin V. Melhorn. By 1927, the City Directory listed Stallard as a “carpenter.” In the 1930 Census, William Stallard, his wife Opal, and their son Bobby lived at 1321 Vine Street, San Diego. William was a building contractor and Opal was a stenographer in a title office. William and Opal divorced in 1932. William died in 1956 at age 60 while vacationing in Flagstaff, Arizona.

Pirl A. Oates was born in 1896 in Havana, Arkansas and grew up in a rural area. Pirl enlisted in the Navy during WWI from 1917 to 1919. He married his wife Esther in 1920. By 1922, they were living in San Diego. Pirl died at age 90 in 1986 in Vista, California, thirty years after his business partner William Stallard passed away.

William B. Stallard and Pirl A. Oates became business partners in the mid-1920s. They remained in business until the early 1950s. One of their most well-known projects was the 1930 Spanish style bungalow courtyard apartments on 2417 Broadway in Golden Hill.

Louise Severin¹⁰¹

Louise Mary Henkensmeier was born in Kansas City, Missouri, in 1892. After moving to San Diego in the 1910s, she apprenticed in the construction trades and had passed the exams required to earn a general contractor’s license by the start of the 1920s. Around the same time, she married Hilmer Severin, who eventually joined her in an assisting role in her construction business. From the late 1920s and through the Great Depression, Louise Severin established herself as builder by buying clusters of lots in existing subdivision blocks in high-end neighborhoods, particularly Kensington. During the Depression, Severin and her husband along with Louise’s mother, Elizabeth Henkensmeier, pooled family funds to buy and sell lots, build homes, and remain solvent.¹⁰² In 1935, Severin was granted the first FHA loan in San Diego for the construction of a home at 4720 Norma Drive (#567).¹⁰³ During World War II, Louise Severin continued to build FHA houses for defense contractors and returning veterans.

Severin completed the designs and personally supervised construction crews for each project. Many of her family members worked for her as carpenters and building assistants. She and other family members would move frequently to be near their current projects or to occupy a speculation house until it was sold. Severin completed six residences within the district between 1934 and 1939.

Louise Severin is best known for her interpretations of Spanish Eclectic styles, including the Spanish Ranch substyle and the Monterey style. Distinctive elements of her work include rusticated stucco textures, wide windows, tapered stucco chimneys with inset panels, parapets topped with Mission tiles, front walled garden or patio areas, and large rooms.¹⁰⁴

Clifford Magee May¹⁰⁵

Clifford Magee May was born in San Diego in 1908. He was a sixth-generation San Diego native and a descendant of the pioneering Estudillo family. May is credited with popularizing the Ranch house and was the originator of the Spanish Ranch style. Originally a furniture designer, he had no formal training in architecture when he began designing homes, finding inspiration in his familiarity with his own family's and the region's Spanish Colonial architectural heritage.¹⁰⁶

Around 1932, May built his first house, for his wife and himself, with the help of engineering contractor Orville U. Miracle. By 1937, May had designed approximately fifty houses in San Diego, mostly in Talmadge Park and La Jolla Hermosa.

May's early Hacienda homes featured a deliberately rustic, hand-crafted character. What distinguished his designs from the Spanish Revival style houses by his contemporaries was their low, spreading quality and close relationship to the outdoors. They were also organized around ground-level galleries and patios rather than raised porches and featured attached garages to help maximize livable space in the rear of lots.¹⁰⁷

May moved to Los Angeles in 1937, where he remained for the rest of his career. In Los Angeles, he continued to produce custom Ranch houses in addition to designing standard plans for tract housing. Among the first of these was the Riviera Ranch subdivision in west Los Angeles, begun in 1939 in partnership with John A. Smith.¹⁰⁸

Orville U. Miracle¹⁰⁹

Orville U. Miracle was born in 1871 in Wisconsin. While living in the Midwest, Miracle built concrete sidewalks and curbs. He moved to San Diego in 1924. In 1927, he started the Miracle Construction Company. That same year he won a contract to pave the sidewalks in Oceanside,

County and State

California. Shortly thereafter, Talmadge developer Roy Litchy hired Miracle to start building sidewalks within Talmadge Park. The O.U. Miracle stamp remains visible in in the district sidewalks.

Roy Litchy's daughter was married to Cliff May. Thus, Cliff May met O. U. Miracle through his father-in-law. The Miracle Construction Company went into partnership with Cliff May and built May's first Ranch style house in 1932 in Talmadge. The name of their company became Cliff May Miracle Company. This first home became a prototype for fifty other Ranch style houses built within San Diego during the May Miracle partnership before WWII.¹¹⁰

O. U. Miracle had an office within Talmadge Park Estates Historic District from 1928 until 1938. This was during the time his company was paving the sidewalks and building two homes. Miracle and his wife lived in the neighborhood from 1933 until 1938. Their home (not extant) was located next to their Miracle Construction Company office at the entrance to Talmadge Park Estates Unit 1 at Monroe Avenue and Euclid Avenue.

Frank R. Carlson

Frank R. Carlson was the engineer who designed Talmadge's historic gates. According to Voter Registration records, he lived in the district in 1928 at 4751 Monroe Avenue (#415). This was during the time the gates were being built and installed. His house was next to the gate he designed at the southeastern corner of Euclid and Monroe Avenues.

| 3. Latitude: 32.763323 | Longitude: -117.088469 |
| 4. Latitude: 32.758670 | Longitude: -117.088482 |

Verbal Boundary Description (Describe the boundaries of the property.)

The boundary is defined by Monroe Avenue on the south, 44th Street on the west, and 49th Street on the east. The homes on both sides of these boundary defining street are included within the district. The north boundary is irregular and follows the contours of Norma Drive, Constance Drive, Natalie Drive, Adams Avenue, Miracle Drive, and Jean Drive. Homes on both sides of these streets are included in the district. The northeast corner of the boundary captures the first two properties on Lorraine Drive and 49th Street radiating out from the Talmadge Traffic Circle.

Boundary Justification (Explain why the boundaries were selected.)

The district corresponds to the original boundaries that delineated the 1926 Talmadge Park Unit 3 and 1928 Talmadge Park Estates Unit 1 subdivisions. It is also bounded by the original decorative iron entry gates that were placed around the edges of the two subdivisions as part of the initial improvements carried out by its developers, Roy and Guy Lichty.

11. Form Prepared By

name/title: Camille Jorgensen, Historian; Eileen Magno, Principal Historian
organization: Heritage Architecture & Planning
name/title: Laura Henson, Geoffrey Hueter, David Moty, Priscilla Ann Berge, Deborah Sanders, Ralph Teyssier, Cameron Lindsay-Hewett
organization: Talmadge Historical Society
street & number: 832 Fifth Avenue
city or town: San Diego state: California zip code: 92101
e-mail: heritage@heritagearchitecture.com
telephone: (619) 239-7888
date: April 2023; Revised August 2023, October 2023

Additional Documentation

Submit the following items with the completed form:

- **Maps:** A **USGS map** or equivalent (7.5 or 15 minute series) indicating the property's location.

Talmadge Park Estates Historic District
Name of Property

San Diego, CA
County and State

- **Sketch map** for historic districts and properties having large acreage or numerous resources. Key all photographs to this map.
- **Additional items:** (Check with the SHPO, TPO, or FPO for any additional items.)

Photographs

Submit clear and descriptive photographs. The size of each image must be 1600x1200 pixels (minimum), 3000x2000 preferred, at 300 ppi (pixels per inch) or larger. Key all photographs to the sketch map. Each photograph must be numbered and that number must correspond to the photograph number on the photo log. For simplicity, the name of the photographer, photo date, etc. may be listed once on the photograph log and doesn't need to be labeled on every photograph.

Paperwork Reduction Act Statement: This information is being collected for nominations to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C.460 et seq.). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Estimated Burden Statement: Public reporting burden for each response using this form is estimated to be between the Tier 1 and Tier 4 levels with the estimate of the time for each tier as follows:

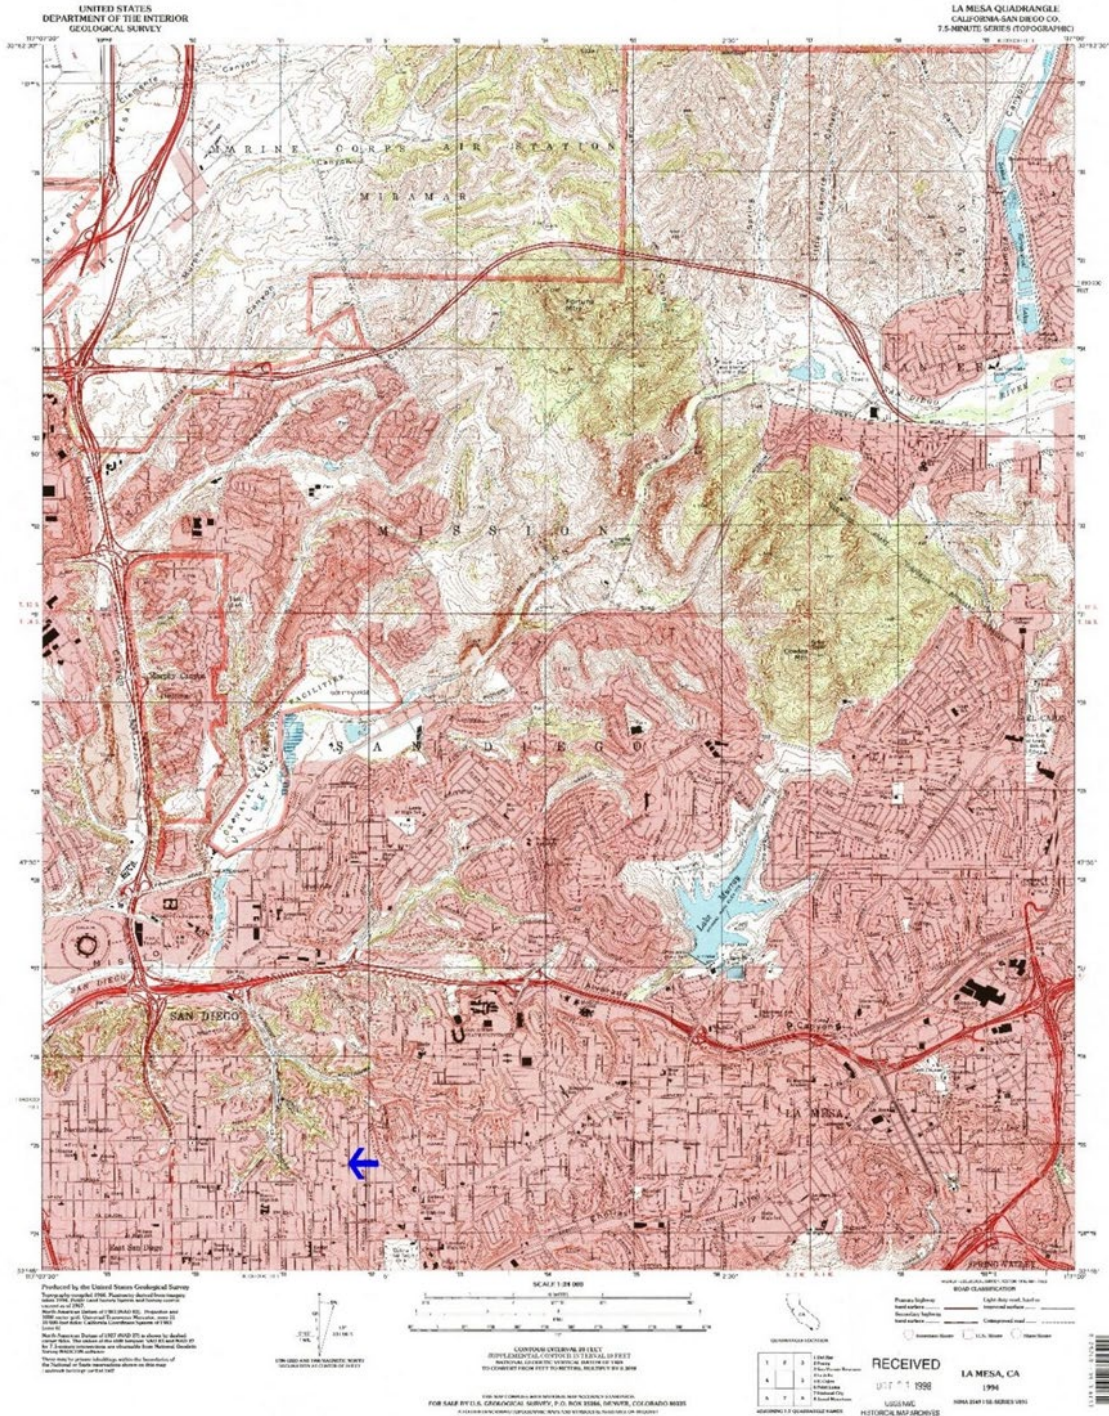

- Tier 1 – 60-100 hours
- Tier 2 – 120 hours
- Tier 3 – 230 hours
- Tier 4 – 280 hours

The above estimates include time for reviewing instructions, gathering and maintaining data, and preparing and transmitting nominations. Send comments regarding these estimates or any other aspect of the requirement(s) to the Service Information Collection Clearance Officer, National Park Service, 1201 Oakridge Drive Fort Collins, CO 80525.
